### DETAILED ACTION

(1)

The reply filed on April 14, 2005 is not fully responsive to the prior Office Action because of the following omission(s) or matter(s): lack of response to the rejections in the previous Office Action mailed 4/6/2005. See 37 CFR 1.111. Since the above-mentioned reply appears to be *bona fide*, applicant is given **ONE (1) MONTH or THIRTY (30) DAYS** from the mailing date of this notice, whichever is longer, within which to supply the omission or correction in order to avoid abandonment. EXTENSIONS OF THIS TIME PERIOD MAY BE GRANTED UNDER 37 CFR 1.136(a).

Applicant should submit an argument under the heading "Remarks" pointing out disagreements with the examiner's contentions. Applicant must also discuss the references applied against the claims, explaining how the claims avoid the references or distinguish from them.

### *Election/Restrictions*

(2)

Newly submitted claims 83-91 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons:

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-82, drawn to a process, classified in class 156, subclass 247.
- II. Claim 83-85, drawn to a process, classified in class 156, subclass 344.

Art Unit: 1734

III. Claims 86-91, drawn to a method, classified in class 427.

(3)

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II or III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require coating and heating an adhesive material for forming adhesive contact or does not require forming a mixture of carbon nanotubes and particles. The subcombination II has separate utility such as by itself without a step of attaching particles of an acicular emitting substance to a substrate, while subcombination III has separate utility such as by itself for forming a cathode without steps of contacting and separating a material.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 83-91 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

So as to not to delay further prosecution of the present application, it is suggested that Claims 83-91 be cancelled in the next response. These claims will not be examined in this case.
